DETAILED ACTION

Information Disclosure Statement

The European Office Action listed in the IDS filed April 13, 2004 has been considered.

Specification

The abstract of the disclosure is objected to because it contains legal terms. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

Claims 9, 10, 11, 12/9, 12/10, 12/11, 13 and 14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 9, line 2, "rotational speed of the crankangle" is unclear.

In claim 13, line 1, "any of" should be deleted.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Currie et al in view of Beck et al. Currie et al discloses a diesel engine control system having an injection quantity control means that determines a period of current supply to provide a quantity of fuel to the combustion chamber. Using the output of an oxygen

Art Unit: 3747

sensor, the control system estimates the current period required to obtain a desired combustion state and calculates a correction amount AFFM which is used to correct the data from the injection quantity control means. The current pulse is used to actuate a fuel injection pump 22. Beck et al teaches using individual fuel injectors in a diesel engine feedback control system. It would have been obvious to one with ordinary skill in the art at the time the invention was made to modify Currie et al to use individual fuel injectors for each cylinder, as taught by Beck et al, to provide improved control accuracy.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Allowable Subject Matter

Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 9, 10, 11, 12/9, 12/10, 12/11, 13 and 14 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claims 8, 12/8, 15 and 17 are allowed.

Conclusion

The fuel injection control systems made of record and not relied upon are considered pertinent to applicant's disclosure.
